>>> Where are we now?

Day 2

1. Search conditions

2. Reading the docs

3. Aggregating

4. Subqueries

5. Recap of day 1

6. Windowing

Send me questions and give feedback

Page is hyperlinked: click a topic above to jump to it.

[3/94]

Search conditions appear in a WHERE clause. They check which rows match the conditions you specify, by making use of:

- * Comparison operators
- * Logical operators
- * Other operators

[4/94]

Search conditions appear in a WHERE clause. They check which rows match the conditions you specify, by making use of:

- * Comparison operators
- * Logical operators
- * Other operators

Definition

A comparison operator is used to compare two things and return true, false or NULL.

- * Click here for comparison operators in the T-SQL docs.
- * Click here for comparison operators in the MySQL docs.

Search conditions appear in a WHERE clause. They check which rows match the conditions you specify, by making use of:

- * Comparison operators
- * Logical operators
- * Other operators

Definition

Logical operators compare true, false or NULL and also return true, false or NULL.

- * Click here for logical operators in the T-SQL docs.
- * Click here for logical operators in the MySQL docs.

Search conditions appear in a WHERE clause. They check which rows match the conditions you specify, by making use of:

- * Comparison operators
- * Logical operators
- * Other operators

Definition

MySQL and T-SQL disagree on where to put this category of operators. I just call them 'other operators'. They include IN, LIKE, BETWEEN, EXISTS and more.

- * Click here for other operators in the T-SQL docs.
- * Click here for other operators in the MySQL docs.

>>> Comparison operators

* WHERE FavColour = 'blue' (equal)

>>> Comparison operators

- * WHERE FavColour = 'blue' (equal)
- * WHERE FavColour <> 'blue' (not equal)
- * WHERE FavColour != 'blue' (also not equal)

[5/94]

>>> Comparison operators

```
* WHERE FavColour = 'blue' (equal)

* WHERE FavColour <> 'blue' (not equal)

* WHERE FavColour != 'blue' (also not equal)

* WHERE Age > 35 (greater than)

* WHERE Year <= 1995 (less than or equal)</pre>
```

[5/94]

>>> Logical operators

		AND		
true	AND	true	=	true
false	AND	true	=	false
true	AND	false	=	false
false	AND	false	=	false

		OR		
true	OR	true	=	true
false	OR	true	=	true
true	OR	false	=	true
false	OR	false	=	false

NOT				
NOT	true	=	false	
NOT	false	=	true	

[-]\$ _ _____

* WHERE FavColour IN ('blue', 'red', 'green')

- * WHERE FavColour IN ('blue', 'red', 'green')
- * WHERE Age BETWEEN 25 AND 35

- * WHERE FavColour IN ('blue', 'red', 'green')
- * WHERE Age BETWEEN 25 AND 35
- * WHERE FirstName LIKE 'b%'

- * WHERE FavColour IN ('blue', 'red', 'green')
- * WHERE Age BETWEEN 25 AND 35
- * WHERE FirstName LIKE 'b%'
- * WHERE FirstName LIKE '%b'

- * WHERE FavColour IN ('blue', 'red', 'green')
- * WHERE Age BETWEEN 25 AND 35
- * WHERE FirstName LIKE 'b%'
- * WHERE FirstName LIKE '%b'
- * WHERE FirstName LIKE '%b%'

- * WHERE FavColour IN ('blue', 'red', 'green')
- * WHERE Age BETWEEN 25 AND 35
- * WHERE FirstName LIKE 'b%'
- * WHERE FirstName LIKE '%b'
- * WHERE FirstName LIKE '%b%'
- * WHERE FirstName LIKE 'b__%'

>>> Operator precedence

Precedence	Operators
1	Anything in round brackets
2	=,<,>,<=,>=,!=,!<,!> (comparison operators)
3	NOT
4	AND
5	OR, ALL, ANY, SOME, EXISTS, BETWEEN, IN, LIKE

[~]\$ _ [8/94

>>> Examples

- 1. 2 = 1 AND 1 = 1
- 2. 1 = 1 OR 2 = 1 AND 1 = 1
- 3. ('red' IN ('green', 'red')) AND ('red' LIKE 'r%')
- 4. NOT (1 = 1 AND 2 = 2 AND 3 = 3)

[9/94]

- 1. 2 = 1 AND 1 = 1
- 2. 1 = 1 OR 2 = 1 AND 1 = 1
- 3. ('red' IN ('green', 'red')) AND ('red' LIKE 'r%')
- 4. NOT (1 = 1 AND 2 = 2 AND 3 = 3)

- 1. 2 = 1 AND true
- 2. 1 = 1 OR 2 = 1 AND 1 = 1
- 3. ('red' IN ('green', 'red')) AND ('red' LIKE 'r%')
- 4. NOT (1 = 1 AND 2 = 2 AND 3 = 3)

- 1. false AND true
- 2. 1 = 1 OR 2 = 1 AND 1 = 1
- 3. ('red' IN ('green', 'red')) AND ('red' LIKE 'r%')
- 4. NOT (1 = 1 AND 2 = 2 AND 3 = 3)

- 1. false
- 2. 1 = 1 OR 2 = 1 AND 1 = 1
- 3. ('red' IN ('green', 'red')) AND ('red' LIKE 'r%')
- 4. NOT (1 = 1 AND 2 = 2 AND 3 = 3)

- 1. false
- 2. 1 = 1 OR false
- 3. ('red' IN ('green', 'red')) AND ('red' LIKE 'r%')
- 4. NOT (1 = 1 AND 2 = 2 AND 3 = 3)

[-]\$ _ [10/94]

- 1. false
- 2. true OR false
- 3. ('red' IN ('green', 'red')) AND ('red' LIKE 'r%')
- 4. NOT (1 = 1 AND 2 = 2 AND 3 = 3)

- 1. false
- 2. true
- 3. ('red' IN ('green', 'red')) AND ('red' LIKE 'r%')
- 4. NOT (1 = 1 AND 2 = 2 AND 3 = 3)

[-]\$ _ [10/94]

- 1. false
- 2. true
- 3. true AND ('red' LIKE 'r%')
- 4. NOT (1 = 1 AND 2 = 2 AND 3 = 3)

[-]\$ _

[10/94]

- 1. false
- 2. true
- 3. true AND true
- 4. NOT (1 = 1 AND 2 = 2 AND 3 = 3)

[~]\$_

- 1. false
- 2. true

- 4. NOT (1 = 1 AND 2 = 2 AND 3 = 3)

[~]\$_

- 1. false
- 2. true
- 3. true
- 4. NOT (true AND 3 = 3)

[~]\$_

- 1. false
- 2. true
- 3. true
- 4. NOT (true AND true)

[10/94]

- 1. false
- 2. true
- 3. true
- 4. NOT (true)

[~]\$

- 1. false
- 2. true
- 3. true
- 4. false

>>> Perils of operator precedence

-- this one evaluates to FALSE

$$1 != 1 AND (2 < 3 OR 3 = 3)$$

-- but this one evaluates to TRUE

$$1 != 1 AND 2 < 3 OR 3 = 3$$

>>> Perils of operator precedence

```
-- this one evaluates to FALSE
1 != 1 AND (2 < 3 OR 3 = 3)
```

-- but this one evaluates to TRUE

$$1 != 1 AND 2 < 3 OR 3 = 3$$

More concretely, consider the following two:

>>> A note on NULL

NULL					
(anything	AND	NULL)	=	NULL	
(anything	OR	NULL)	=	NULL	
(anything	=	NULL)	=	NULL	

We will get practice with NULLs during the exercises.

[12/94]

Enjoy.

>>> Where are we now?

Day 2

1. Search conditions

2. Reading the doc:

3. Aggregating

4. Subqueries

5. Recap of day 1

6. Windowing

Send me questions and give feedback

Page is hyperlinked: click a topic above to jump to it.

[14/94]

>>> Reading the docs

- * Quickly look something up when you forget syntax
- * Learn new things while you browse and decipher
- * Gain a deeper understanding
- * It actually gets easy pretty quickly

>>> Reading the docs

- * Quickly look something up when you forget syntax
- * Learn new things while you browse and decipher
- * Gain a deeper understanding
- * It actually gets easy pretty quickly

Be brave, the documentation can sense fear

[-]\$ _ [15/94]

>>> Data Manipulation Language (DML)

Later, we will learn some Data Definition Language (DDL).

- st Click here for MySQL DML docs
- st Click here for T-SQL DML docs

>>> Data Manipulation Language (DML)

Later, we will learn some Data Definition Language (DDL).

- * Click here for MySQL DML docs
- * Click here for T-SQL DML docs

Wait, what have we been learning?

- * Click here for MySQL SELECT docs
- * Click here for T-SQL SELECT docs

The word 'query' actually refers to SELECT!

[16/94]

>>> The syntax conventions

Why is it so hard to read? Syntax, used to make the documentation clearer and more succinct.

- * Click here for MySQL Syntax Conventions
- * Click here for T-SQL Syntax Conventions

>>> The important syntax conventions

MySQL	T-SQL	Description
[a]	[a]	a is optional
{a}	{a}	a is not optional
[a b]	[a b]	optionally, choose a or b
{a b}	{a b}	not optional, choose a or b
a [, a]	a [,n]	optionally repeat a (with comma)
label	<label></label>	a label/placeholder

[-]\$ _ [18/94]

```
SELECT [ALL | DISTINCT] select expr [, select expr] ...
[ INTO <new table> ]
[ FROM  [....n] ]
[ WHERE <search condition> ]
[ GROUP BY {col_name | expr }, ... ]
[ HAVING <search condition> ]
[ ORDER BY {order by expression [ ASC | DESC ]} [,...n] ]
```

```
Square brackets mean content is optional.
```

```
SELECT [ALL | DISTINCT] select_expr [, select_expr] ...
[ INTO <new_table> ]
[ FROM <table_source> [,...n] ]
[ WHERE <search condition> ]
[ GROUP BY {col_name | expr }, ... ]
[ HAVING <search condition> ]
[ ORDER BY {order by expression [ ASC | DESC ]} [,...n] ]
```

```
Curly brackets mean content is mandatory.
```

```
SELECT [ALL | DISTINCT] select_expr [, select_expr] ...
[ INTO <new_table> ]
[ FROM <table_source> [,...n] ]
[ WHERE <search condition> ]
[ GROUP BY {col_name | expr }, ... ]
[ HAVING <search condition> ]
[ ORDER BY {order by expression [ ASC | DESC ]} [,...n] ]
```

Vertical line means choose one.

```
SELECT [ALL | DISTINCT] select_expr [, select_expr] ...
[ INTO <new_table> ]
[ FROM <table_source> [,...n] ]
[ WHERE <search condition> ]
[ GROUP BY {col_name | expr }, ... ]
[ HAVING <search condition> ]
[ ORDER BY {order by expression [ ASC | DESC ]} [,...n] ]
```

```
>>> The SELECT clause
```

must choose one.

```
SELECT [ALL | DISTINCT] select_expr [, select_expr] ...
[ INTO <new_table> ]
[ FROM <table_source> [,...n] ]
[ WHERE <search condition> ]
[ GROUP BY {col_name | expr }, ... ]
[ HAVING <search condition> ]
[ ORDER BY {order by expression [ ASC | DESC ]} [,...n] ]
```

```
>>> The SELECT clause
```

```
optionally choose one.
```

```
SELECT [ALL | DISTINCT] select_expr [, select_expr] ...
[ INTO <new_table> ]
[ FROM <table_source> [,...n] ]
[ WHERE <search condition> ]
[ GROUP BY {col_name | expr }, ... ]
[ HAVING <search condition> ]
[ ORDER BY {order by expression [ ASC | DESC ]} [,...n] ]
```

Repeat with commas (T-SQL)

```
SELECT [ALL | DISTINCT] select_expr [, select_expr] ...
[ INTO <new_table> ]
[ FROM <table_source> [,...n] ]
[ WHERE <search condition> ]
[ GROUP BY {col_name | expr }, ... ]
[ HAVING <search condition> ]
[ ORDER BY {order by expression [ ASC | DESC ]} [,...n] ]
```

Repeat with commas (MySQL)

```
SELECT [ALL | DISTINCT] select_expr [, select_expr] ...
[ INTO <new_table> ]
[ FROM <table_source> [,...n] ]
[ WHERE <search condition> ]
[ GROUP BY {col_name | expr }, ... ]
[ HAVING <search condition> ]
[ ORDER BY {order by expression [ ASC | DESC ]} [,...n] ]
```

```
Also repeat with commas (MySQL)
```

```
SELECT [ALL | DISTINCT] select_expr [, select_expr] ...
[ INTO <new_table> ]
[ FROM <table_source> [,...n] ]
[ WHERE <search condition> ]
[ GROUP BY {col_name | expr }, ... ]
[ HAVING <search condition> ]
[ ORDER BY {order by expression [ ASC | DESC ]} [,...n] ]
```

Labels or placeholders

```
SELECT [ALL | DISTINCT] select_expr [, select_expr] ...
[ INTO <new_table> ]
[ FROM <table_source> [,...n] ]
[ WHERE <search condition> ]
[ GROUP BY {col_name | expr }, ... ]
[ HAVING <search condition> ]
[ ORDER BY {order by expression [ ASC | DESC ]} [,...n] ]
```

>>> A discovery...

SELECT [ALL|DISTINCT] FirstName, LastName, FavColour

From the MySQL SELECT docs (click here):

The ALL and DISTINCT modifiers specify whether duplicate rows should be returned. ALL (the default), specifies that all matching rows should be returned, including duplicates. DISTINCT specifies removal of duplicate rows from the result set. It is an error to specify both modifiers. DISTINCTROW is a synonym for DISTINCT.

```
>>> Read the docs: FROM
```

T-SQL will often use ::= to define placeholders.

```

>>> Where are we now?

Day 2

1. Search conditions

2. Reading the docs

3. Aggregating

4. Subqueries

5. Recap of day 1

6. Windowing

Send me questions and give feedback

Page is hyperlinked: click a topic above to jump to it.

Aggregating queries collect the rows of a table into groups, and return a single value for each group. They can also discard groups.

We will cover:

- 1. GROUP BY clause
- 2. Aggregation function
- 3. HAVING clause

Aggregating queries collect the rows of a table into groups, and return a single value for each group. They can also discard groups.

We will cover:

- 1. GROUP BY clause creates the groups
- 2. Aggregation function
- 3. HAVING clause

[-3\$ _

Aggregating queries collect the rows of a table into groups, and return a single value for each group. They can also discard groups.

We will cover:

- 1. GROUP BY clause creates the groups
- 2. Aggregation function computes one value for each group
- 3. HAVING clause

[-3\$ _

Aggregating queries collect the rows of a table into groups, and return a single value for each group. They can also discard groups.

We will cover:

- 1. GROUP BY clause creates the groups
- 2. Aggregation function computes one value for each group
- 3. HAVING clause discards groups

The HAVING clause discards $\underline{\text{groups}}$ just like the WHERE clause discards rows.

The GROUP BY clause groups the rows of a table according to the values of one or more columns. The easiest way to understand it is with examples.

We will look at the execution of this query:

SELECT P.friendID FROM Notes.Pets P GROUP BY P.friendID;

FROM Notes.Pets P

Pets				
PetID	PetName	PetDOB	FriendID

We cannot ignore data types! Arithmetic with integers always

returns an integer (by rounding down).

$$AVG(\{1,2\}) = 1$$

So we need to use CAST.

>>> Casting - aggregation warning!

>>> Casting - aggregation warning!

We cannot ignore data types! Arithmetic with integers always

We cannot ignore data types! Arithmetic with integers always returns an integer (by rounding down).

$$AVG(\{1,2\}) = 1$$

So we need to use CAST. For example, in Notes.RandomPeople, the data type for Age is integer.

SELECT gender, AVG(age) AS AverageAge FROM Notes.RandomPeople GROUP BY gender;

Must be changed to:

SELECT gender, AVG(CAST(age AS decimal(5,2))) AS AverageAge FROM Notes.RandomPeople GROUP BY gender;

The HAVING clause was created because WHERE is executed before GROUP BY.

We will look at the execution of this query:

SELECT RP.gender, AVG(RP.age) AS AverageAge FROM Notes.RandomPeople RP GROUP BY RP.gender HAVING AVG(RP.age) > 40;

The HAVING clause is like WHERE, but it acts on groups.

[61/94]

The HAVING clause was created because WHERE is executed before GROUP BY.

We will look at the execution of this query:

SELECT RP.gender, AVG(RP.age) AS AverageAge FROM Notes.RandomPeople RP GROUP BY RP.gender HAVING AVG(RP.age) > 40;

Search condition with aggregation function

The HAVING clause is like WHERE, but it acts on groups.

[61/94]

>>> Group practice

The aggregation function in the HAVING clause does not have to match the one in the SELECT clause.

SELECT RP.gender, STDEV(RP.age) AS AverageAge FROM Notes.RandomPeople RP GROUP BY RP.gender HAVING AVG(RP.age) > 40;

Explain in words what the above query achieves.

[69/94]

The query finds the sample standard deviation of the ages for each gender that has an average age greater than $40\,$.

[-]\$ _

>>> Kahoot! Aggregation

Enjoy.

>>> Where are we now?

Day 2

- 1. Search conditions
- 2. Reading the docs
- 3. Aggregating
- 4. Subqueries
- 5. Recap of day 1
- 6. Windowing

Send me questions and give feedback

Page is hyperlinked: click a topic above to jump to it.

[72/94]

>>> Basic subquery

Subqueries (next slide) are powerful with search conditions. In fact, some logical operators only work with subqueries:

- * EXISTS
- * AT.T.
- * ANY

Subqueries are also known as nested queries.

[73/94]

>>> Class practice

Can anyone figure out what this does? Note: the subquery is executed first.

SELECT *
FROM Notes.Friends F

WHERE F.friendID IN (SELECT P.friendID

FROM Notes.Pets P);

1. SELECT P.friendID FROM Notes.Pets P

 SELECT P.friendID FROM Notes.Pets P Retrieves a table of all the FriendIDs in Notes.Pets.

- SELECT P.friendID FROM Notes.Pets P Retrieves a table of all the FriendIDs in Notes.Pets.
- 2. Let's refer to the output of Step 1 as RESULT.

- SELECT P.friendID FROM Notes.Pets P Retrieves a table of all the FriendIDs in Notes.Pets.
- 2. Let's refer to the output of Step 1 as RESULT.
- 3. SELECT * FROM Notes.Friends F WHERE F.FriendID IN RESULT

- SELECT P.friendID FROM Notes.Pets P Retrieves a table of all the FriendIDs in Notes.Pets.
- 2. Let's refer to the output of Step 1 as RESULT.
- 3. SELECT * FROM Notes.Friends F WHERE F.FriendID IN RESULT Retrieves only the rows of Notes.Friends whose FriendID is in RESULT.

- SELECT P.friendID FROM Notes.Pets P Retrieves a table of all the FriendIDs in Notes.Pets.
- 2. Let's refer to the output of Step 1 as RESULT.
- 3. SELECT * FROM Notes.Friends F WHERE F.FriendID IN RESULT Retrieves only the rows of Notes.Friends whose FriendID is in RESULT.

It retrieved the details of all friends who have pets. Let's execute it to experiment.

>>> Challenge

Can we rewrite it as a join?

SELECT *
FROM Notes.Friends F
WHERE F.friendID IN

WHERE F.friendID IN (SELECT P.friendID FROM Notes.Pets P);

[~]\$ _ [76/94]

Quick note: a subquery does not have to be used only in the WHERE clause. It can be used almost anywhere, but we will look at this later.

[77/94]

Find all the people whose Gender has AVG(Age) less than 40.

>>> How about this one?

Easy, right?

[78/94]

Find all the people whose Gender has AVG(Age) less than 40.

Easy, right?

FROM RandomPeople GROUP BY Gender HAVING AVG(Age) < 40;

SELECT PersonName

>>> How about this one?

[78/94]

Find all the people whose Gender has AVG(Age) less than 40.

Easy, right?

SELECT PersonName FROM RandomPeople GROUP BY Gender HAVING AVG(Age) < 40;

>>> How about this one?

Wrong!

Let's try and execute it.

[78/94]

>>> Can you explain why?

FROM RandomPeople GROUP BY Gender

Unnamed			
PersonName	Gender	Age	
(Beyoncé,	F (37,		
Laura Marling)	ı.	28)	
(Darren Hayes,	, M M M		
Bret McKenzie)			
(Jack Monroe)	NB	(30)	

SELECT PersonName FROM RandomPeople GROUP BY Gender HAVING AVG(Age) < 40;

```
>>> Use a subquery instead
```

```
SELECT PersonName
FROM RandomPeople
WHERE Gender IN (SELECT Gender
FROM RandomPeople
GROUP BY Gender
HAVING AVG(Age) < 40);
```

Let's execute it and explore.

[80/94]

```
>>> Correlated subquery
```

The hardest thing in introductory SQL...

```
SELECT PersonName
FROM RandomPeople RP
WHERE age > (SELECT AVG(age)
FROM RandomPeople
WHERE gender = RP.gender);
```

[81/94]

```
>>> Correlated subquery
```

The hardest thing in introductory SQL...

```
SELECT PersonName
FROM RandomPeople RP
WHERE age > (SELECT AVG(age)
FROM RandomPeople
WHERE gender = RP.gender);
```

The notes have a good diagram for this...

[81/94]

```
>>> A subquery in FROM
```

What does it do?

SELECT Gender, AvgAge
FROM (SELECT Gender, AVG(Age) AS AvgAge
FROM RandomPeople
GROUP BY Gender)
WHERE AvgAge < 40;

[-]\$ _

```
>>> A subquery in FROM
```

What does it do?

```
SELECT Gender, AvgAge
FROM (SELECT Gender, AVG(Age) AS AvgAge
FROM RandomPeople
GROUP BY Gender)
WHERE AvgAge < 40;
```

Can we rewrite it with HAVING?

[82/94]

Enjoy.

>>> Where are we now?

Day 2

1. Search conditions

2. Reading the docs

3. Aggregating

4. Subqueries

5. Recap of day 1

6. Windowing

Send me questions and give feedback

Page is hyperlinked: click a topic above to jump to it.

[85/94]

>>> What is windowing?

- * Aggregation functions return one value per group.
- * Window functions return one value per row.
- * Window functions are not scalar functions.

On the next slide: what are windows?

[86/94]

>>> Windows are... groups

The only reason we don't call them groups is because we use (and create) them differently.

[87/94]

The only reason we don't call them groups is because we use (and create) them differently.

Sometimes they're called partitions instead of windows.

- * 'Groups' when we return one value per group.
- st 'Partitions'/'windows' when we return one value per row.

[-]\$_

```
>>> First few window functions
```

You ready...?

>>> First few window functions

You ready...?

T-SQL	MySQL	Purpose
AVG	AVG	Average
STDEV	STDDEV_SAMP	Sample standard deviation
STDEVP	STDDEV_POP	Population standard deviation
VAR	VAR_SAMP	Sample variance
VARP	VAR_POP	Population variance
COUNT	COUNT	Count number of rows
MIN	MIN	Minimum
MAX	MAX	Maximum
SUM	SUM	Sum

Danny... what are you talking about?? Those are aggregation functions.

What will this do?

SELECT PersonName, MIN(Age) AS MinimumAge FROM RandomPeople;

What will this do?

SELECT PersonName, MIN(Age) AS MinimumAge FROM RandomPeople;

Error: MIN made the whole table one group

What will this do?

SELECT PersonName, MIN(Age) AS MinimumAge FROM RandomPeople;

Error: MIN made the whole table one group

Here we go

SELECT PersonName, MIN(Age) OVER() AS MinimumAge FROM RandomPeople;

Success: OVER() made the whole table one partition.

[89/94]

What will this do?

SELECT PersonName, MIN(Age) AS MinimumAge FROM RandomPeople;

Error: MIN made the whole table one group

Here we go

SELECT PersonName, MIN(Age) OVER() AS MinimumAge FROM RandomPeople;

Success: OVER() made the whole table one partition.

The aggregation still returns one result per partition, but now that single result gets duplicated for each row.

[89/94]

>>> So how do we form the windows?

The minimum age for each person's gender?

SELECT PersonName, MIN(Age) OVER() AS MinimumAge FROM RandomPeople;

[-]\$ _

>>> So how do we form the windows?

The minimum age for each person's gender?

SELECT PersonName, MIN(Age) OVER(PARTITION BY Gender) AS MinimumAge FROM RandomPeople;

So what will this do?

SELECT PersonName,
Age - MIN(Age) OVER(PARTITION BY Gender) AS AgeDiff
FROM RandomPeople;

[90/94]

>>> Remember this?

Find all the people whose Gender has AVG(Age) less than 40.

```
SELECT PersonName
FROM RandomPeople
WHERE Gender IN (SELECT Gender
FROM RandomPeople
GROUP BY Gender
HAVING AVG(Age) < 40);
```

Can we rewrite it? Let's do it live.

[91/94]

We know SELECT executes last, so what will this do?

SELECT Gender, MAX(Age) OVER() FROM Notes.RandomPeople

GROUP BY Gender;

We know SELECT executes last, so what will this do?

SELECT Gender, MAX(Age) OVER() FROM Notes.RandomPeople GROUP BY Gender;

Error: MAX is a windowed aggregation function now.

- * MAX((37,28)) = 37
- * MAX((37,28)) OVER() = (37,37)

[92/94]

We know SELECT executes last, so what will this do?

SELECT Gender, MAX(MAX(Age)) OVER()

FROM Notes.RandomPeople GROUP BY Gender;

Fixed: we can add a regular aggregation function inside it.

[92/94]

We know SELECT executes last, so what will this do?

SELECT Gender, MAX(Age) OVER() FROM Notes.RandomPeople

GROUP BY Gender;

Fixed: we can add a regular aggregation function inside it.

Shall I go through it on the blackboard?

[92/94]

Enjoy.
